

The plan should indicate room dimensions (A), ceiling heights (B), cupboards & wardrobes (C), room uses (D), the manhole and/or underfloor access point (E) and the location of the gas meter/lpg bottles (F). We also need to know if the house is on a slab or has less than 300mm clearance under the house. If there is at least 1m space under the house at the underfloor access point, this should also be noted.
